From Zoom video conference calls and dashcam recordings to consumer content and beyond, multimedia content has grown exponentially to 82% of all internet traffic globally[1]. This content however poses significant challenges for corporations and their external counsel due to data volume and complexity as well as review efficiency. **Consilio Complete Media is a comprehensive solution designed to meet these challenges by merging secure global infrastructure, proprietary conversion applications and advanced indexing technology.**

The Complete Media Difference

- **Proven video expertise** serving matters of all sizes & types. All data is securely hosted within Consilio's data center using specialty hardware needed for large-scale video projects

- **Leverage proprietary tools to convert video into reviewable format with searchable audio tracks** that can be searched – all deployed on Consilio's scalable global infrastructure.

- **User-friendly Sightline review experience** includes video player and audio waveforms so reviewers can visualize and navigate video review effectively.

- **Leverage artificial intelligence and dedicated GPU infrastructure to automatically identify, track and redact faces, people, license plates, and vehicles –** with a variety of available patterns (including mosaic, blur, outline, fill, and pixelate).

- **Search audio content in video files to cull and prioritize your review** so users can identify terms / phrases and review exactly where spoken. Apply audio redactions consisting of beeps, mute, or scrambled patterns.

- **Experienced Project Managers** can quickly prepare and incorporate efficient video review workflows into normal operations.

Focus on the Content that Matters with Efficient Video & Audio Review

Deployed on our secure global infrastructure, dedicated GPU hardware efficiently processes video file, separating tracks for indexing so users can efficiently search for spoken terms and phrases. Reviewers leverage our award-winning Sightline eDiscovery platform and media review interface that combines video with an audio waveform in one uniform experience.

AI technology automatically identifies and redacts faces, people, license plates and vehicles for redaction.

Review interface features both video content as well as an audio waveform.

Review teams apply coding decisions through customizable coding forms.

Play, pause, skip forward or back 10 seconds, skip to next or previous phonetic hit location

Fully integrated Nexidia® phonetic searching shows the hit locations within the audio file

Accelerate Review of Media: Lower Total Cost & Increase Accurancy

Complete Media incorporates proven infrastructure, support, and innovations focused on helping case teams review efficiently and lower media review costs.

Increase Reviewer Efficiency

With an enhanced online streaming video player and audio waveform, reviewers see the visual waveform representation of the content and audio track, allowing them to jump directly to the sections where speech can be found. Additionally, to increase efficiency, reviewers can speed up the playback up to 2x and skip forward 10 seconds in one click during slow portions.

Eliminate Manual Redactions with Artificial Intelligence

Improve reviewer productivity by automatically identifying and redacting sensitive media content and replacing redacted portions with pattern of your choice. Manual redactions are also available.

Optimize Search & Review Workflows

Dramatically reduce the cost of review by searching words or phrases of spoken audio and reviewing exact moments of interest. By focusing on these search hits, you can prioritize or even potentially eliminate the review irrelevant video / audio content.

Leverage a Best-in-Class eDiscovery Platform

Support your entire matter lifecycle with the Sightline eDiscovery platform – rated Leader, Best Support, and Top Momentum amongst all eDiscovery platforms[2]. We invite you to explore a powerfully simple user experience, fully integrated analytics, seamless document productions, and more.
